Pet food supply runout estimate

Avoid running out of food by estimating days remaining.

Three steps

1. Use the current feeding amount
2. Check stock quantity
3. Allow delivery time before reordering

A worked example

Food on hand	2400 g
Daily amount	200 g
Days left	12
Reorder date	In 7 days

2400 divided by 200 gives 12 days at the agreed amount.

Follow owner and veterinary guidance; do not change portions.

Pet food supply runout estimate

Use one row per item or decision. Start with what you know.

Food on hand	Daily amount	Days left	Reorder date
