Plant watering decision log

Stop watering on autopilot and record what each plant actually needs.

Three steps

1. Identify each plant
2. Check soil and species-specific guidance
3. Record the action and next check

A worked example

Plant	Pothos
Light/location	Indirect light
Soil check	Still moist
Action	Wait
Next check	Friday

Moist soil means wait and recheck, rather than watering by calendar alone.

Plant requirements vary; avoid universal watering rules.

Plant watering decision log

Use one row per item or decision. Start with what you know.

Plant	Light/location	Soil check	Action	Next check

My next action / when
