Track energy use between meter readings

Understand the difference between two readings without guessing about cost.

Three steps

1. Record safely accessible readings
2. Subtract earlier from latest
3. Compare like-length periods

A worked example

Meter	Electricity
Earlier reading	12450
Latest reading	12620
Units used	170 kWh
Period	One month

12620 - 12450 = 170 kWh used. Bill cost depends on the tariff.

Do not access unsafe equipment. Confirm tariffs and meter units with your supplier.

Track energy use between meter readings

Use one row per item or decision. Start with what you know.

Meter	Earlier reading	Latest reading	Units used	Period
