Travel connection time check

Check whether a transfer allows enough time to reach the next departure.

Three steps

1. Check actual arrival and departure times
2. Include terminal changes and security where required
3. Allow a realistic delay buffer

A worked example

Arrival time	14:00
Next departure	16:00
Transfer minutes	55
Required buffer	45
Decision	20 min spare

120 minutes minus 55 and 45 leaves 20 minutes of spare time.

Confirm minimum connections and travel conditions with carriers.

Travel connection time check

Use one row per item or decision. Start with what you know.

Arrival time	Next departure	Transfer minutes	Required buffer	Decision
